EMAIL VERIFICATION ENDPOINT TEST REPORT

MADE BY: STEPHEN LI
ID: 19488679
Wintec

Email Verification Endpoint Specification

Email verification after registration.

Accepted user type: student client

Request

Method	URL
POST	api/emailVerification/

Type	Params	Values
POST	server_ref	string
POST	otp	string

Response

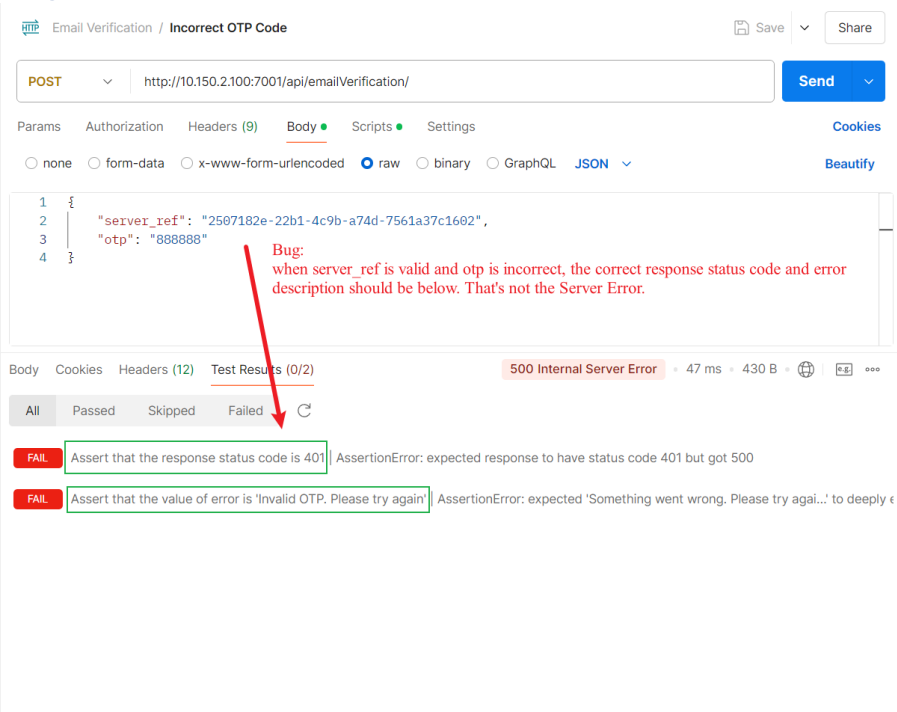
Status	Response
200	{“description“:”Email verification successful. Please Sign In”}
~~400~~	~~{"error":"server_ref or OTP is empty"}~~
401	{"error":"Invalid server_ref. Please try again"}
401	{"error":"Invalid OTP. Please try again"}
410	{"error":"Invalid OTP. OTP has expired"}
500	{"error":"Something went wrong. Please try again later"}

Process Flow

- Check **user_verification** table for matching **active** server_ref & OTP
  - **[server_ref={server_ref} && otp={otp} and status=1]**
- If record found →
  - Update **status** to **0** in **user_verification** table
  - Update **user_status** =**1** in **application_users**
  - Add a record to the **students** table with **student_email** and **submission_date**
  - Return success response
- If record not found →
  - Update **status** to **0** in **user_verification** table **[where server_ref={server_ref}]**
  - Return 401 error code with response

All Bugs Identified in Postman

Bug 1: Test Incorrect OTP Code



Bug 2: Test OTP Code is empty

Email Verification / **OTP Code is empty**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ Send

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2     "server_ref": "4ce9a654-a492-427e-ac21-e21c3c854215",
3     "otp": null
4 }
```

Bug:
when server_ref is correct and otp is empty, correct response status code and error description should be below. That's not the Server Error.

Body | Cookies | Headers (12) | Test Results (0/2) | 500 Internal Server Error | 66 ms | 430 B

All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid OTP. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to deeply e

Bug 3: Test server_ref is empty

Email Verification / **server_ref is empty**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ Send

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2     "server_ref": null,
3     "otp": "105139"
4 }
```

Bug:
when server_ref is empty and otp is correct, correct response status code and error description should be below. That's not the Server Error.

Body | Cookies | Headers (12) | Test Results (0/2) | 500 Internal Server Error | 67 ms | 430 B

All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid server_ref. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to de

Bug 4: Test 6 digit OTP Code contains letters

Email Verification / **6 digit OTP Code contains letters**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ **Send**

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2     "server_ref": "7bdb0a16-b504-4266-a7c7-b3f2ed2454c3",
3     "otp": "12345a"
4 }
```

Bug:
when server_ref is valid and otp contains letter, correct response code and error description should be below. That's not the Server Error.

Body | Cookies | Headers (12) | Test Results (0/2) — 500 Internal Server Error · 56 ms · 430 B

All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid OTP. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to deeply e

Bug 5: Test 6 digit OTP Code contains special characters

Email Verification / **6 digit OTP Code contains special characters (e.g. $)**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ **Send**

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2     "server_ref": "7e4be81d-23a0-4c31-9f32-80db965cc014",
3     "otp": "12345$"
4 }
```

Bug:
when server_ref is correct and otp contains special characters, correct response status code and error description should be below. That's not the Server Error.

Body | Cookies | Headers (12) | Test Results (0/2) — 500 Internal Server Error · 64 ms · 430 B

All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid OTP. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to deeply e

Bug 6: Test 5 numbers OTP Code

Email Verification / **5 numbers OTP Code**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ Send

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2     "server_ref": "712cd027-be14-4c4a-abcd-f66c6b03e242",
3     "otp": "12345"
4 }
```

Bug:
when server_ref is correct and 5 numbers OTP Code, correct response status code and error description should be below. That's not the Server Error.

Body | Cookies | Headers (12) | Test Results (0/2) | 500 Internal Server Error | 54 ms | 430 B

All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid OTP. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to deeply e

Bug 7: Test 7 numbers OTP Code

Email Verification / **7 numbers OTP Code**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ Send

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2     "server_ref": "0ce817a1-de26-42c4-a426-5b6cfa4f8463",
3     "otp": "1234567"
4 }
```

Bug:
when server_ref is correct and 7 numbers OTP Code, correct response status code and error description should be below. That's not the Server Error.

Body | Cookies | Headers (12) | Test Results (0/2) | 500 Internal Server Error | 64 ms | 430 B

All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid OTP. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to deeply e

Bug 8: Test Invalid server_ref

Email Verification / **Invalid server_ref**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ Send

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2   "server_ref": "abc",
3   "otp": "279428"
4 }
```

Bug:
when server_ref is invalid and otp is valid, correct response status code and error description should be below. That's not the Server Error.

Body | Cookies | Headers (12) | Test Results (0/2) | 500 Internal Server Error | 87 ms | 430 B

All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid server_ref. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to de

Bug 9: Test Missing Parameter

Email Verification / **Missing Parameter: The required parameter 'otp' is missing.**

Save | Share

POST http://10.150.2.100:7001/api/emailVerification/ Send

Params | Authorization | Headers (9) | Body | Scripts | Settings | Cookies

none | form-data | x-www-form-urlencoded | raw | binary | GraphQL | JSON | Beautify

```
1 {
2   "server_ref": "f0ee9e9b-0895-418d-b0e7-5da8e1e48e39"
3 }
```

Bug:
when sercer_ref is valid and otp is missing, correct response status code and error description should be below. That's not the Server Error.

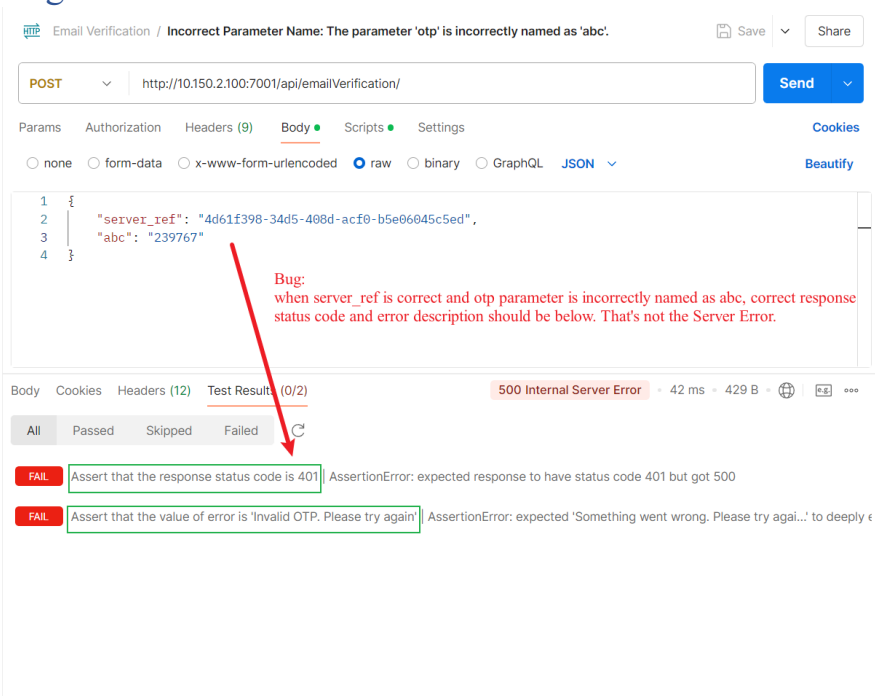
Body | Cookies | Headers (12) | Test Results (0/2) | 500 Internal Server Error | 39 ms | 429 B

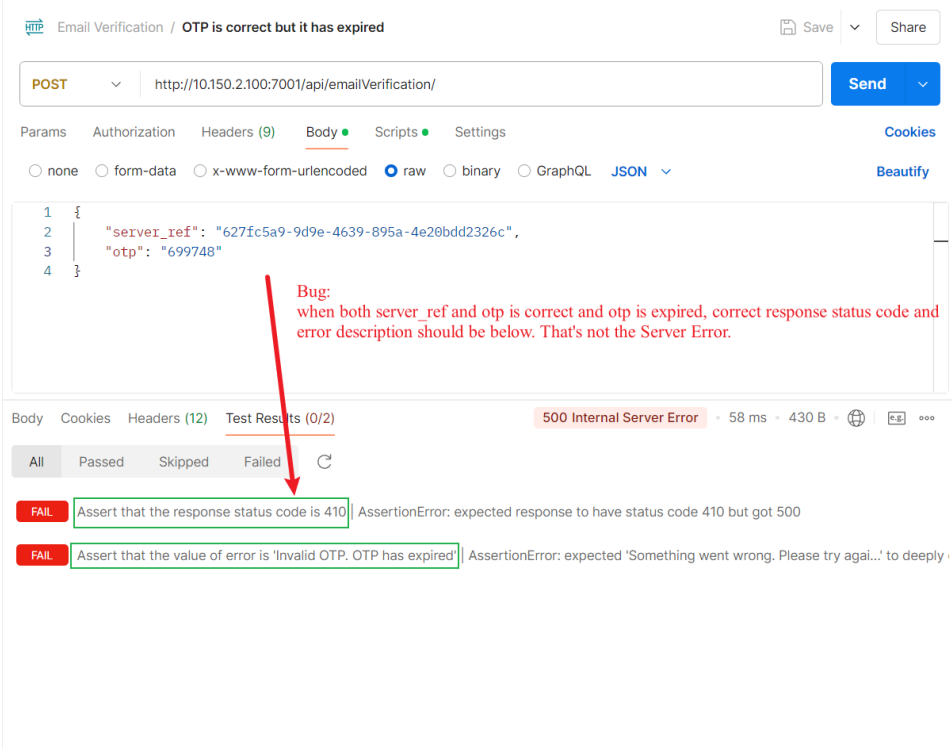
All | Passed | Skipped | Failed

FAIL Assert that the response status code is 401 | AssertionError: expected response to have status code 401 but got 500

FAIL Assert that the value of error is 'Invalid OTP. Please try again' | AssertionError: expected 'Something went wrong. Please try agai...' to deeply e

Bug 10: Test Incorrect Parameter Name





Bug 11: Test OTP is correct but it has expired
